

### Product Function

Used for measuring transformer winding resistance, conductor DC resistance, cable length, etc.

### Product features

1. The tester Max output voltage is 24V, Max test current is 10A. It has a fast test speed and can be applied to the measurement of transformers and other resistances.
2. There are two measurement modes: automatic measurement mode, which can automatically select the test current based on the load; Manual measurement mode: 6 test current gears can be chosen.
3. With Bluetooth communication function, user can make the testing operate and view the test result after installing the APP. The tester also equips with USB interface and monitoring software, which can communicate with computer.
4. With discharge function, which can automatically discharge after testing.
5. With alarm function, can set resistance alarm value. Additionally, the tester has automatic shutdown function, which will automatically shut down after 15 minutes without any operation when the automatic shutdown is set.
